Use a weight of evidence approach.

Based on the information that is in the Annual Network Plan, EPA has determined that the Annual Network Plan meets the requirements listed in 40 CFR 58.10, except for ...

Identify critical criteria for approval. All else is WOE.

Identify action if deficient (request for next-year's plan, disapprove portion, address issue and resubmit, etc.)

Identify which have to be met for network adequacy vs. ANP approval (if there is a difference) or just which inform network adequacy.

Do we want a checklist for each site or a checklist for entire network?
